

Your Simple Cloud Certifications Roadmap for 2025

Starting your cloud journey can feel overwhelming with dozens of certificates available. This roadmap cuts through the noise so you know exactly which certification to pick first.

What you'll learn:

- 1 Step 1: Start with the Cloud Basics
- 2 Step 2: Choose Your Path - Building vs. Managing
- 3 Step 3: Master Containers with Kubernetes
- 4 Step 4: Build a Home Lab

1

TIP 1 OF 4

Step 1: Start with the Cloud Basics

Before building complex systems, you need to speak the language of the cloud. Fundamentals exams like AWS Cloud Practitioner teach you what servers, storage, and networking actually mean in plain English. Think of it as learning the road signs before getting your driver's license.

```
$# No code needed here! Just read the official AWS/Azure whitepapers and take free introductory train
```

2

TIP 2 OF 4

Step 2: Choose Your Path - Building vs. Managing

Once you know the basics, pick an Associate-level certification based on what you enjoy. If you like designing systems and drawing architecture diagrams, choose Solutions Architect. If you like writing code and deploying apps, choose Developer.

```
$# Spin up a basic Linux virtual server (EC2) on your cloud free tier to practice the fundamentals
aws ec2 run-instances --image-id ami-0abcdef1234567890 --count 1 --instance-type t2.micro
```

3

TIP 3 OF 4

Step 3: Master Containers with Kubernetes

Containers are like standardized shipping boxes for your code. Learning how to manage them is one of the most in-demand skills in the cloud industry today. The CKAD certification proves you actually know how to deploy and troubleshoot apps in containers.

```
$# Check if your local container tool is working properly
docker run hello-world
```

4

TIP 4 OF 4

Step 4: Build a Home Lab

Certificates look great on a resume, but hands-on experience gets you hired. Spend 30 minutes every day building small projects in the cloud console. Set up budget alerts so you never accidentally spend money on the free tier.

```
$# Use Terraform to build your cloud infrastructure using code instead of clicking buttons  
terraform init && terraform apply
```

See Key Takeaways on next page >> linkedin.com/in/mramanrajsingh

Key Takeaways

- + Always set up a billing alert on your cloud account immediately
- + Focus 70% of your time on hands-on labs and 30% on reading
- + Take notes using simple analogies that make sense to you
- + Build a capstone project after finishing each certification study guide
- + Join community Discord servers to ask questions when you get stuck

Watch Out For

- ! Collecting multiple basic certificates instead of going deep into one track
- ! Ignoring practice exams and failing just because of time management
- ! Leaving cloud resources running overnight and getting unexpected bills
